

## Global and Local Sustainability

**Degree Offered:** Bachelor of Arts

The Global and Local Sustainability degree prepares students for the twenty-first century by developing problem-solving skills while addressing current sustainability issues.

Students will be prepared to pursue an increasingly wide range of careers, as well as bring a new set of skills to traditional careers.

### Career Options:

Sustainability Officer for companies or non-profit organizations; Community Planner; Agency Administrator for social justice organization; Global Health Educator; Grant Writer; Media and Communications Project Manager; Director for community agriculture initiatives; Investment Manager; Sustainable Designer; Energy Auditor, and more. Graduates can also pursue work in environmental product testing; marketing and sales of environmentally-friendly products; and broad employment by corporations committed to sustainable practices, as well as seek graduate training in law, health care, business, and other fields.

### Graduates will be PREPARED for future challenges

- Social entrepreneurship training prepares for *ethical, proactive, and creative approaches* to improve communities.
- Global and local projects provide a *"sense of community"* connecting with its natural, built and cultural dimensions.
- Sustainable design seminars *cultivate skills* of independent thinking and collaboration as team members and change agents.
- Applied coursework enhances the ability to identify opportunities rather than problems and see the big picture as well as understand the small details.
- Coursework in sustainability and a chosen focus area *strengthens trans-disciplinary problem-solving* in local and global communities.

### Where are our graduates?

- Research Associate, Ohio Agricultural Research Station
- English Teacher, Madrid, Spain
- Green Energy Company
- Graduate program in International Business

## Global & Local Sustainability Students at Daemen gain EXPERIENCE

- All students in the program complete a ***study abroad experience*** and engage in a community project while in the foreign country.
- Through living in a foreign country and working within a different culture on problems relevant to those communities, students are better able to address domestic community issues with ***unique insights*** from their global experience.
- The annual Sustainable Design Seminars are an integral component of the major. Students work as teams to ***design and implement solutions*** to meet community needs. Projects in this course allow students to work closely with community organizations to help serve Buffalo and Western New York.

*did you know...*

Students can choose from **over 20 countries** to study and experience community life. While there, they can work on projects such as marketing plans for fair trade goods, community water installations, early education in indigenous communities, sustainable agriculture, sanitation and hygiene education, and graphic design promotion for community campaigns.

## Why Global and Local Sustainability at Daemen College?

- This program is the first in Western New York to offer a curriculum focused on educating students on sustainability concepts and how they can be applied to our modern communities.
- With a student/faculty ratio of 12:1, you receive personalized attention in a small class setting.
- You can choose a concentration area from Daemen's existing disciplines or design your own focus.
- Daemen has an extensive network of community partnerships with social justice goals, including environmental non-profit organizations and green businesses.
- You will work with community leaders and residents and apply your coursework to help promote the social, environmental, and economic well-being of communities around the globe.

### Kenzie Reynen, Global and Local Sustainability

"I participated in an agricultural internship in Kenya for 3 weeks where I created 3 vertical gardens, learned about and practiced milking, gardening, composting, and more. I presented this work at Daemen's Academic Festival 2012.

In my Sustainable Design Seminar class I worked with my classmates to design a system for Daemen to re-use food scraps. When the semester ended I oversaw the implementation of the project.

Daemen has now diverted over 3 tons of kitchen scraps to compost instead of heading to the landfill. After graduation, Kenzie applied her sustainable agriculture specialization to research at the Ohio Agricultural Research Development Center."
